#### Overview

**01** Research Question

**Dataset Overview And Methodology** 

03 Data
Analysis/Visualization

**04** Conclusion

#### **Research Question**

How can we define which audio features are most important in curating a cohesive playlist?

Mercury is small

Mercury

## Dataset Overview and Methodology

#### **Spotify Web API & Million Playlist Dataset**

- Spotify Million Playlist Dataset was used to get playlists
- Curl requests made with track ID, Access token
- Audio-features/Tracks API used

Dataset -

	PLAYLIST_id	PLAYLIST_name	TRACK_uri	TRACK_name	ALBUM_id	ALBUM_name	ALBUM_type	ARTIST_names	DURATION_ms	RELEASE_date
o	0	Throwbacks	0UaMYEvWZi0ZqiDOoHU3YI	Lose Control (feat. Ciara & Fat Man Scoop)	6vV5UrXcfyQD1wu4Qo2l9K	The Cookbook	album	Missy Elliott	226863	2005-07-04

#### **Dataset Creation**

- Batched API requests reduce the total server requests.
- Dictionary of each track is a dataframe entry containing:
  - Features
  - Playlist name
  - Playlist ID
- General statistics for each playlist is extracted:

	DURATION_ms	POPULARITY	DANCEABILITY	ACOUSTICNESS	ENERGY	INSTRUMENTALNESS	VALENCE	TEME

#### **Features**

```
acousticness number [float]
danceability
            number [float]
         number [float]
energy
instrumentalness
                   number [float]
     integer
liveness
          number [float]
```

```
number [float]
loudness
mode
        integer
popularity
             integer
speechiness
             number [float]
          number [float]
valence
        number [float]
tempo
```

### **Exploratory Data Analysis** and Visualization

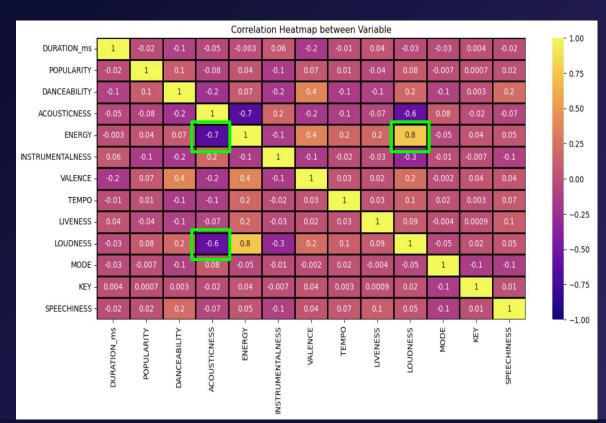

#### **Feature Correlation - Entire Dataset**

- Feature correlation across all the playlists
- Positive correlation of 0.8 is observed between Energy and Loudness
- Negative correlation of -0.7 is observed between Energy and Accousticness

Mercury is small

Mercury

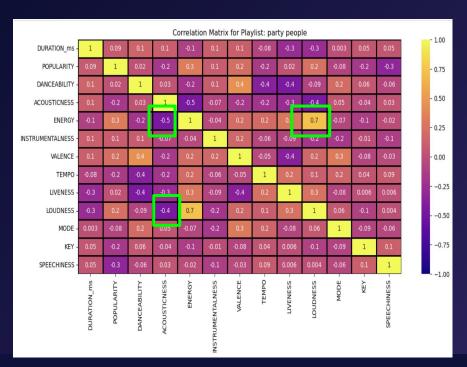

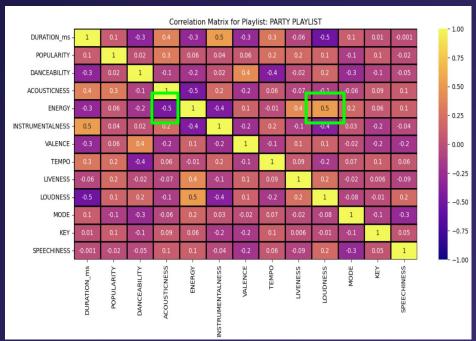

#### **Feature Correlation in Party Playlists**

 ENERGY exhibits robust positive correlation with LOUDNESS

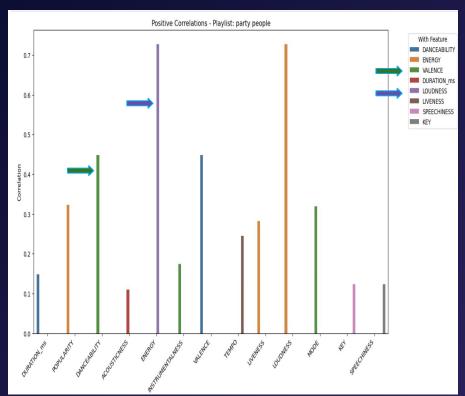

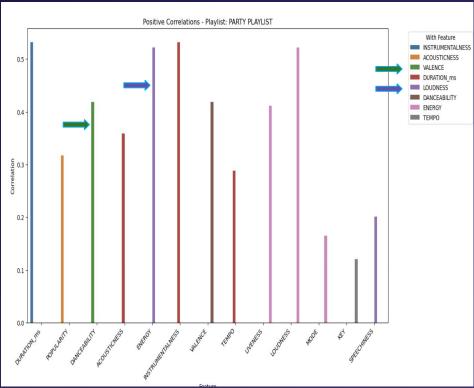

#### **Positive Correlation in Party Playlists**

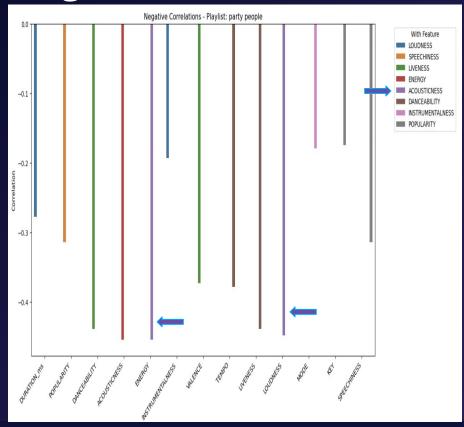

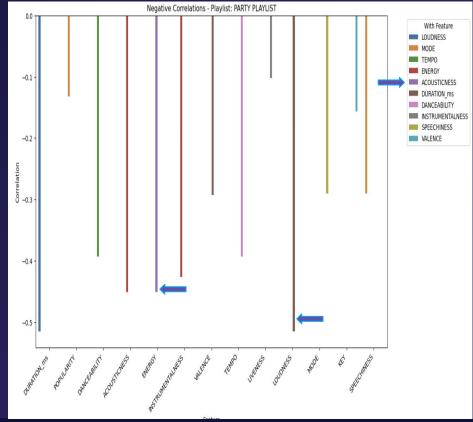

#### **Negative Correlation in Party Playlists**

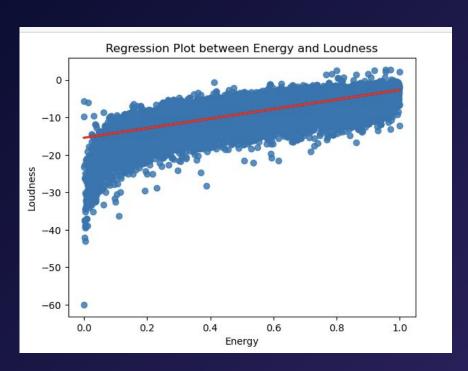

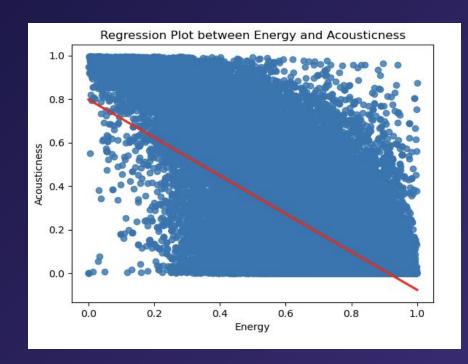

#### **Regression plots**

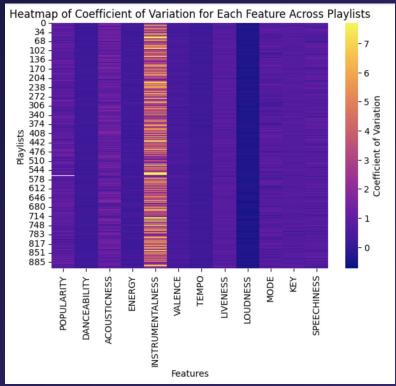

#### Which features vary the least within a

playlist?

DANCEABILITY	0.225554			
TEMPO	0.231488			
ENERGY	0.289662			
LOUDNESS	0.361610			
VALENCE	0.444259			
KEY	0.709852			
MODE	0.734123			
LIVENESS	0.748750			
SPEECHINESS	0.764847			
POPULARITY	0.888399			
ACOUSTICNESS	1.103000			
INSTRUMENTALNESS	3.869145			
dtype: float64				

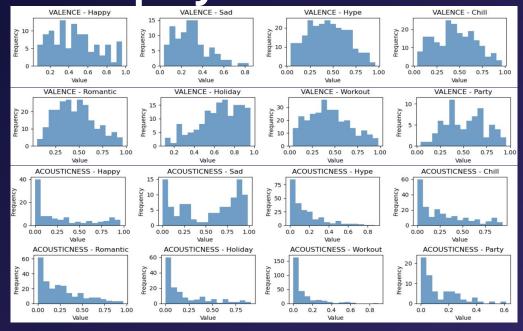

## Which features determine differentiation of mood in a playlist?

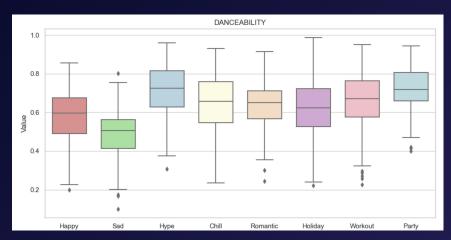

Mercury is small

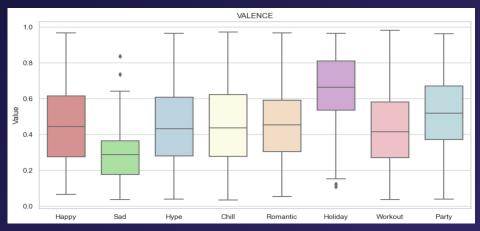

Mercury

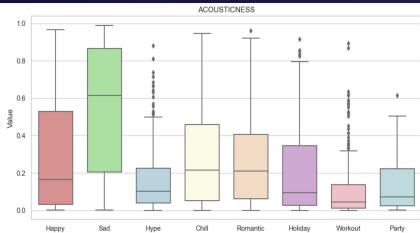

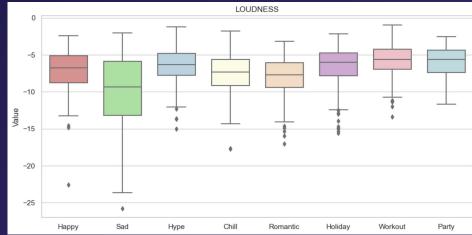

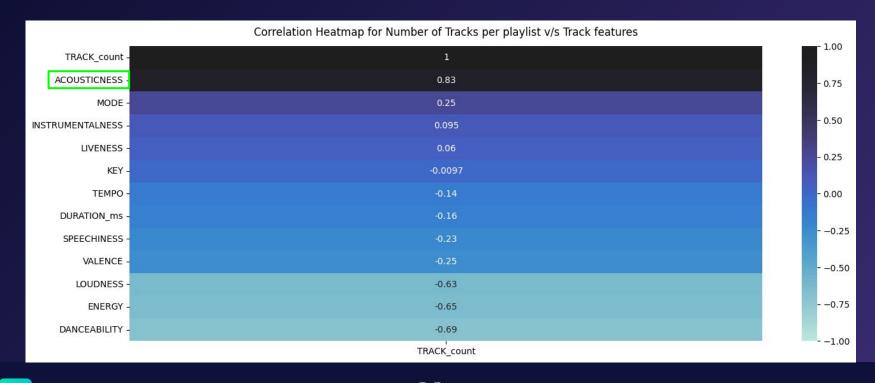

## Which features determine the popularity of a playlist?

## What kind of songs do longer playlists have?

#### Conclusions

- Features that are highly correlated: Danceability, Loudness and Accousticness
- Features that determine the mood of a playlist?
  - Hype playlists: higher speechiness, danceability, and popularity
  - Happy and hype playlists: higher loudness and energy
  - Sad playlists: higher acousticness

Mercury is

#### Conclusions

- Features that vary the least within a playlist?
  - Danceability, tempo, energy
- Features that determine the playlist popularity?
  - Doesn't depend on audio features of track
  - Depends on number of times a track has been played and recency of plays
- Features that determine the length of the playlist?
  - Longer playlists More Acoustic songs, Less party songs

Mercury is
